

Introduction

This is a poster box

- > Use  $\LaTeX$ code as usual
- > Write stuff
- > Give me feedback if you don't like this.
- > You can also let me know if you do like it.
  - > As usual, you can stack orders of itemize.

A Box

Another poster box. Bottom-aligned with the introduction box.

A wide Box

A third poster box  
Use the column, row, span, above, below and bottomaligned keys to position boxes.

Outlook

And yet another one, stretching down to the foot.  
I could add some useful how-to-use guide here, but than this would be more like an options.tex and less an example. So meh.
